

## **EXPERIMENT 1**

**Feb 11,2024**

**AIM : Introduction to Computer hardware : Physical identification of major components of a computer system such as mother board, RAM modules, daughter cards, bus slots, SMPS, internal storage device, interfacing ports, Specifications of desktop and server class computers. Installation of common operating systems for desktop and server use.**

### **COMPUTER HARDWARE**

Computer hardware includes the physical parts of a computer, such as the case, central processing unit (CPU), random access memory (RAM), monitor, mouse, keyboard, computer data storage, graphics card, sound card, speakers and motherboard.

By contrast, software is the set of instructions that can be stored and run by hardware. Hardware is so-termed because it is hard or rigid with respect to changes, whereas software is soft because it is easy to change.

Hardware is typically directed by the software to execute any command or instruction. A combination of hardware and software forms a usable computing system, although other systems exist with only hardware.

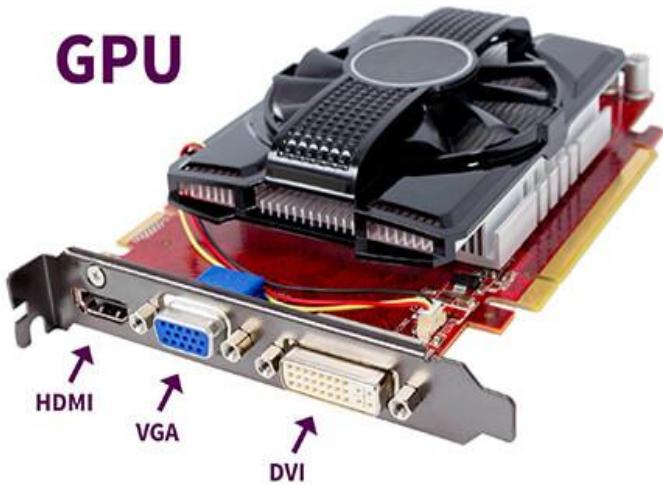

## **MOTHER BOARD**

The motherboard serves as a single platform to connect all of the parts of a computer together. It connects the CPU, memory, hard drives, optical disk, video card, sound card, and other ports and expansion cards directly or via cables. It can be considered as the backbone of a computer. Motherboard contains ports to connect all of the internal components. It holds together many of the crucial components of a computer, including central processing unit, memory and connectors for input and output devices.

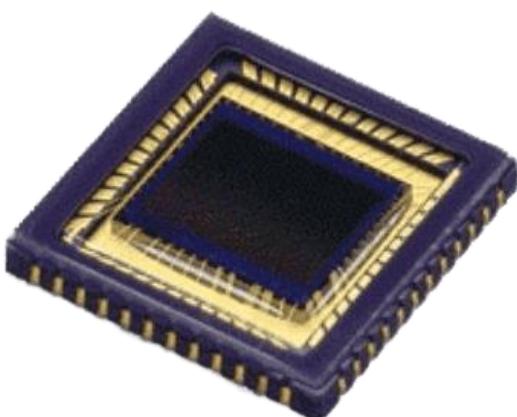

## **GPU(GRAPHIC PROCESSING UNITS)**

GPUs also known as graphic cards or video cards or graphics cards. In order to display pictures, videos, audios, and 2D or 3D animations, each device uses a GPU. A GPU performs fast calculations of arithmetic and frees up the CPU to do different things.

## **CMOS (COMPLEMENTARY METAL OXIDE SEMICONDUCTOR)**

CMOS is a combination of NMOS and PMOS transistors that operates under the applied electrical field. The structure of CMOS was initially developed for high density and low power logic gates .The main purpose of CMOS in computers is to store important system settings and configurations such as the date and time, boot order, hardware settings ,and password information .This information stored in a small battery-powered chip on the motherboard called CMOS battery

## **HDMI (HIGH DEFINITION MULTIMEDIA INTERFACE)**

It is an all digital audio-video interface which transmits signals in uncompressed format.

Eg: uncompressed video data and compressed or uncompressed digital data from a HDMI-compliant source device to a computer monitor, video projector, digital television...etc.

## **DGA (DOMAIN GENERATION ALGORITHM)**

It is a technique used by cyber attackers to generate new domain names and IP addresses for malware's command and control servers.

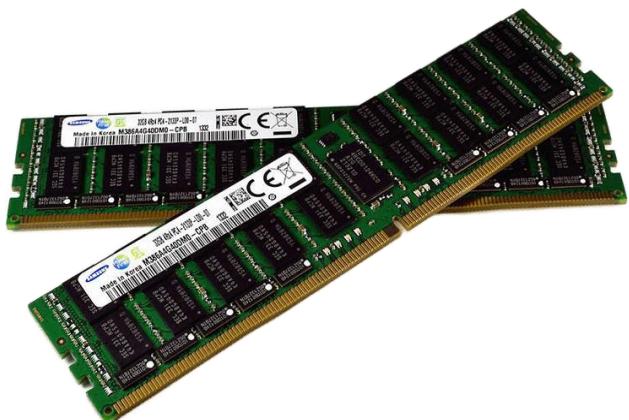

## **COOLING FAN**

A computer is any fan inside, or attached to, a computer case used for active cooling. Fans are used to draw cooler air into the case from the outside. Expel warm air from inside and move air across a heat sink to cool a particular component.

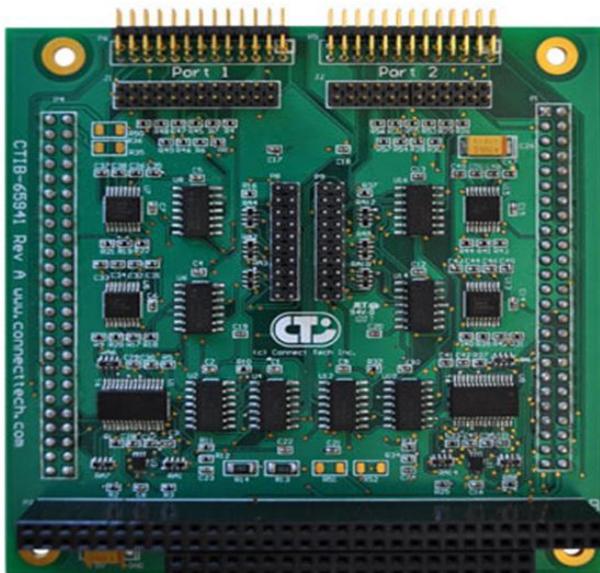

## **RAM MODULES**

In computing, a memory module or RAM (random access memory) stick is a printed circuit board on which memory integrated circuit are mounted. Memory modules permit easy installation and replacement in electronic systems, especially computers such as personal computers, word stations, and servers. The first memory modules were proprietary designs that were specific to a model of computer from a specific manufacturer.

## **DAUGHTER CARD**

A daughterboard (or daughter board , daughter card , or daughtercard is a circuit board that plugs into and extends the circuitry of another circuit board. The other circuit board may be the computer's main board (its motherboard ) or it may be another board or card that is already in the computer, often a sound card. The term is commonly used by manufacturers of wavetable daughterboards that attach to existing sound cards.

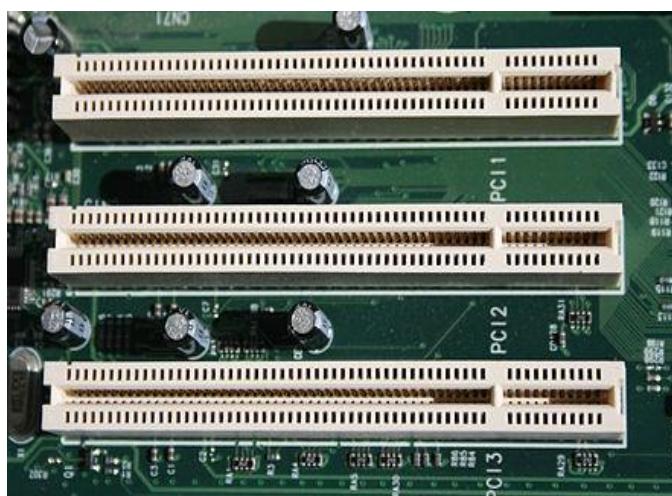

## **SMPS (SWITCHED MODE POWER SUPPLY)**

SMPS is an electronic power supply system that makes use of a switching regulator to transfer electrical power effectively. It is a PSU (POWER SUPPLY UNIT) and is usually used in computers to change the voltage to the appropriate range for the computer.

## **BUS SLOT**

Alternatively known as a bus slot or expansion port, an expansion slot is a connection or port inside a computer on the motherboard or riser card. It provides an installation point for a hardware expansion card to be connected. For example, if you wanted to install a new video card in the computer, you'd purchase a video expansion card and install that card into the compatible expansion slot.

## **STORAGE DEVICES**

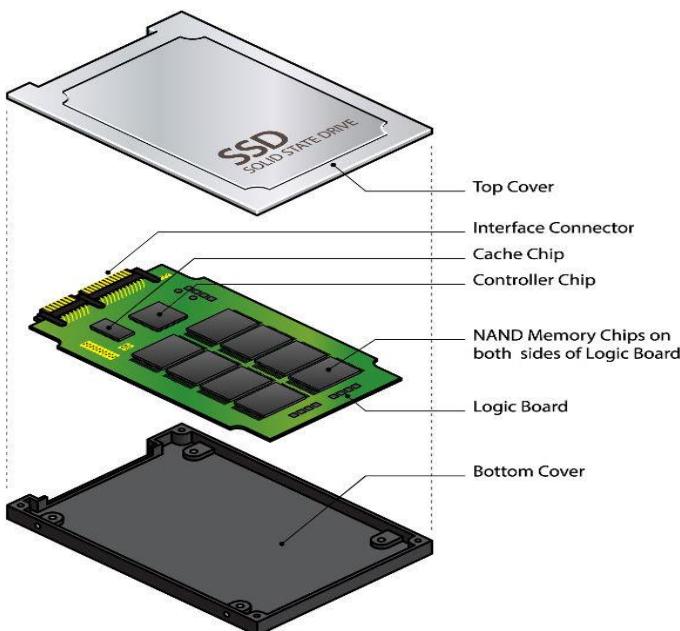

A storage device is a kind of hardware, which is also known as storage, storage medium, digital storage, or storage media that has the ability to store information either temporarily or permanently. It is used to hold, port, and extract data files.

Two storage devices are

- **SSD**
- **HDD**

### **SSD (SOLID STATE DRIVE)**

SSD is non-volatile storage device, it stores the data on flash memory chips and maintains the data in a permanent state, even when the power is off. As compared to electromechanical drives, SSDs have lower latency and access quickly. These storage devices store the data in the semiconductor cells.

**Several types of SSD are,**

- **SATA SSD**
- **mSATA SSD**
- **M.2 SATA SSD**

### **SATA SSD**

SATA is the acronym for ‘serial advanced technology attachment’.

Speaking of SSD type SSD is the most popular today.

### **mSATA SSD**

Its mini version of SATA. It has a smaller form factor mainly used in ultra-compact computers, laptops, mobile devices with an mSATA slot, in which the installation of an extended size SATA SSD is impossible.

## **M.2 SATA SSD**

Its newer, and its format is lighter and smaller than the SATA SSD.

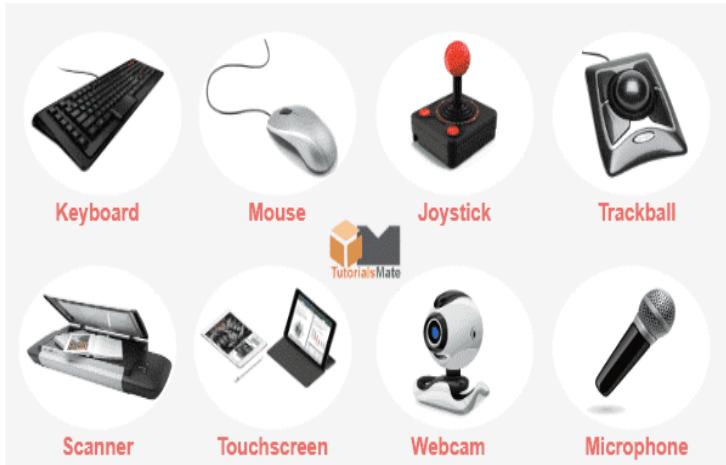

## **HDD (HARD DISK DRIVE)**

HDD is an electro mechanical storage device, which is an abbreviation of hard disk drive. It uses magnetic storage for storing and retrieving the digital data. It is a non-volatile storage device. Hard disk is installed internally in our computer systems, which is connected directly to the disk controllers of the motherboard. HDD means data is retained when our computer system is shut down.

## **INPUT DEVICES /UNIT**

An input device is essentially a piece of instrument or hardware that allows users to provide data, information, or control instructions to a computer used for interaction and control. Data is entered into a computer in a raw format, which is converted into computer understandable language by input devices and processed by a central processing unit (CPU) to produce output.

Some common types of input devices are:

- **KEYBOARD**
- **SCANNER**
- **MOUSE**

### **KEYBOARD**

The keyboard is one of the primary input devices, which helps in entering data and commands in a computer. A normal keyboard is

usually has a variety of keys, such as alphabetic character keys, function keys, number keys, arrow keys, and control keys. The keyboard can be connected to a computer using USB or BLUETOOTH.

## **SCANNER**

Scanner is an input device, which works more like a photocopy machine. It used when some information is available on paper and it is to be transferred to the hard disk of the computer for further manipulation.

## **MOUSE**

Mouse is the most common and very popular pointing device that helps interact with a computer through a process called 'point and click'. This

is mainly used to move a cursor on the computer's screen and click on the corresponding object using buttons (usually left, right, and middle key roller buttons).

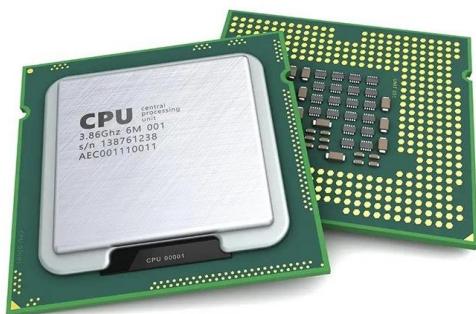

## **PROCESSING UNIT**

The part of a computer that performs logical and arithmetical operation on the data as specified in the instructions.

## **CPU(CENTRAL PROCESSING UNIT)**

A central processing unit is also called a processor, central processor, or microprocessor. It carries out all the important functions of a computer. It stores all important programs like operating systems and application software. It is often referred to as the brain of the computer.

## **OUTPUT DEVICES/UNITS**

The output device displays the result of the processing of raw data that is entered in the computer through an input device. There are a number of output devices that displays output in different ways such as text, images, hard copies, and audio or video.

Some popular output devices are:

- **MONITOR**
- **SPEAKERS**
- **PROJECTOR**

### **MONITOR**

A monitor is a piece of computer hardware that accepts data from a computer and displays it on the system screen through the computers video card. Monitors have the ability to display information at much

higher resolution. Additionally, these are much like televisions and also known as video screen, display, video display terminal, or video display unit.

## **SPEAKER**

The most common output devices, speakers accept sound data from a computer and play the sounds for users to hear.

## **PROJECTOR**

Projector is an output device that accepts data from a computer and projects that data or information as a picture onto a wall or screen or any large surface.

## **INTERFACING PORTS**

A port is a physical docking point using which an external device can be connected to the computer. It can also be programmatic docking point through which information flows from a program to the computer or over the Internet.

An interfacing port, also known as a communication port, is a physical socket on a device that allows it to connect to other devices and exchange data. It acts as a gateway for sending and receiving information between different electronic systems.

## USB, Keyboard and Mouse

## Storage / Disk

## Network / Communications

## Audio

## Video

## Power

- **Serial port(COM Port):** A serial port is also called a communication port and they are used for connection of external devices like a modem, mouse, or keyboard (basically in older PCs). Serial cables are cheaper to make in comparison to parallel cables and they are easier to shield from interference. There are two versions of it, which are 9 pin model and 25 pin model. It transmits data at 115 KB/sec.
- **Parallel Port (LPT ports):** Parallel ports are generally used for connecting scanners and printers. It can send several bits at the same time as it uses parallel communication. Its data transfer speed is much higher in comparison with the serial port. It is a 25 pin model. It is also known as Printer Port or Line Printer Port.
- **USB (Universal Serial Bus):** In 1997 USB was first introduced. This can connect all kinds of external USB devices, like external hard disk, printer, scanner, mouse, keyboard, etc. There are minimum of two USB Ports provided in most of the computer systems. It is a kind of new type serial connection Port that is much faster than the old serial Ports and These USB Ports are much smarter and more versatile, as it allows the “daisy chaining” of up to 127 USB peripherals connected to one port. The data transfer rate in this is Data12 megabits per second. It also provides plug & plays communication.

- **PS/2 Port:** PS/2 ports are special ports used for connecting old computer keyboard and mouse. It was invented by IBM. In old computers, there are minimum of two PS/2 Ports, each for the keyboard and the mouse. It is a 6 pin mini Din connector.
- **VGA Port:** VGA ports also known as Video Graphic Array connector are those which connect the monitor to a computer's video card. VGA port has 15 holes and it is similar to the serial port connector. But VGA Ports have holes in it and the serial port connector has pins in it.
- **Sockets:** Microphones and speakers are connected with the help of Sockets to the sound card of the computer.
- **FireWire Port:** The IEEE 1394 interface, which is developed in the late 1980s and early 1990s by Apple as FireWire. It can transfer large amount of data at very high speed. It is used to connect camcorders and video equipment to the computer. It comes up with three variants which are 4-Pin FireWire 400 connector, 6-Pin FireWire 400 connector, and 9-Pin FireWire 800 connector

- **Infrared Port:** An Infrared(IR) port is used to sends and receives infrared signals from other devices. It is a kind of wireless type port with a limited range of 5-10ft.
- **Game Port:** These ports are used previously to connect a joystick to a PC. But nowadays it is replaced by USB ports.
- **Modem Port:** As the name suggests, a Modem port is used to connects a PC's modem to the telephone network.
- **Digital Video Interface(DVI) Port:** DVI Port is used to connects LCD(flat panel) monitor to the computer's high-end video graphic cards and it is very popular among video card manufacturers.
- **Ethernet Port:** Ethernet Port helps to connect to a network and high-speed Internet(provided by LAN or other sources). It connects the network cable to a computer and resides in a Ethernet card. It provides a data travel speed of 10 Mb to 1000 Mb(megabits) per second.

## **DESKTOP**

A desktop computer is a personal computer designed for regular use at a single location on or near a desk due to its size and power requirements. The most common configuration has a case that houses the power supply, motherboard (a printed circuit board with a microprocessor as the central processing unit, memory, bus, certain peripherals and other electronic components), disk storage (usually one or more hard disk drives, solid state drives, optical disc drives, and in early models a floppy disk drive), a keyboard and mouse for input; and a computer monitor, speakers, and, often, a printer for output. The case may be oriented horizontally or vertically and placed either underneath, beside, or on top of a desk.

## **SERVER OPERATING SYSTEM**

A server operating system is a type of operating system that is designed to be installed and used on a server computer. It is advanced version of operating system, having features and capabilities required within a client-server architecture or similar enterprise computing environment.

Example: Windows Operating System, Linux Operating System

## **DATA SERVER**

A data server is a software program/platform used to provide database service like storing, processing, and securing data.

## **FILE SERVERS**

File servers store and distribute files. Multiple clients or users may share files stored on a server. In addition, centrally storing files offers easier backup or fault tolerance solutions than attempting to provide security and integrity for files on every device in an organization. File server hardware can be designed to maximize read and write speeds to improve performance.

## **MAIL SERVERS**

Mail servers are a very common type of application server. Mail servers receive emails sent to a user and store them until requested by a client on behalf of said user. Having an email server allows for a single machine to be properly configured and attached to the network at all times. It is then ready to send and receive messages rather than requiring every client machine to have its own email subsystem continuously running.

## **WEB SERVERS**

One of the most abundant types of servers in today's market is a web server. A web server is a special kind of application server that hosts programs and data requested by users across the Internet or an intranet. Web servers respond to requests from browsers running on client computers for web pages, or other web-based services. Common web

servers include Apache web servers, Microsoft Internet Information Services (IIS) servers and Nginx servers.

### **Server-class computers:**

#### **BLADE SERVERS**

The original computer server hardware was large and stored in racks that could hold hundreds of pounds. Over time, however, faster means of connecting hardware resulted in parts of the server being extracted from a single self-contained device. By removing hard drives, eliminating internal cooling, and the ongoing miniaturization of computing parts, servers were eventually reduced to a single thin server known as a blade server. While still stored in racks in server rooms, blade servers are smaller and can be replaced more easily.

#### **RACK SERVERS**

A rack server, also known as a rack mount server, rack-mounted server or rack mount computer, is a computer designed to be situated in a rectangular structure called a server rack. The advantages of a server rack include better space conservation for rack servers, increased scalability, maximized air flow when coupled with a cooling system and ease of regular computer maintenance and diagnostics, given that

their design allows technicians and operators to easily slide rack servers in and out of them.

## **TOWER SERVERS**

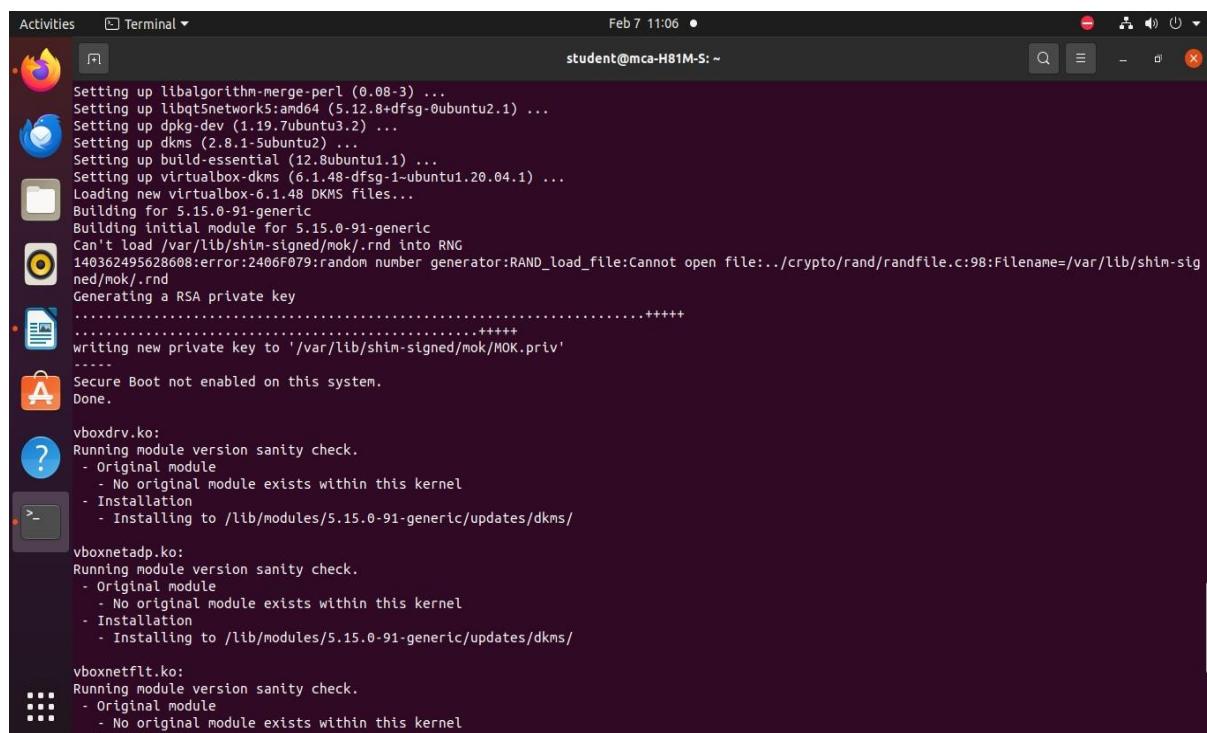

A tower server is a computer intended for use as a server and built in an upright cabinet that stands alone. The cabinet, called a tower, is similar in size and shape to the cabinet for a tower-style personal computer. This is in contrast to rack servers or blade servers, which are designed to be rack-mounted. Advantages of tower servers include: Easier cooling, because the overall component density is fairly low. Scalability, because an unlimited number of servers can be added to an existing network.

## **INSTALL UBUNTU ON VIRTUALBOX**

Oracle VM VirtualBox is free and open-source and being developed by oracle corporation. Oracle VirtualBox is a cross-platform virtualization application. It installs on your existing Intel or AMD-based computers, whether they are running Windows, Mac, Linux or Solaris operating systems .VirtualBox can create and run a "guest" operating system (virtual machine) in a window of the host operating system. The virtual machine provides a self-contained environment in which to experiment with new software without risking damaging changes to the host operating system

### **VirtualBox Installation**

- sudo apt-get install virtualbox
- sudo apt-get install virtualbox-ext-pack

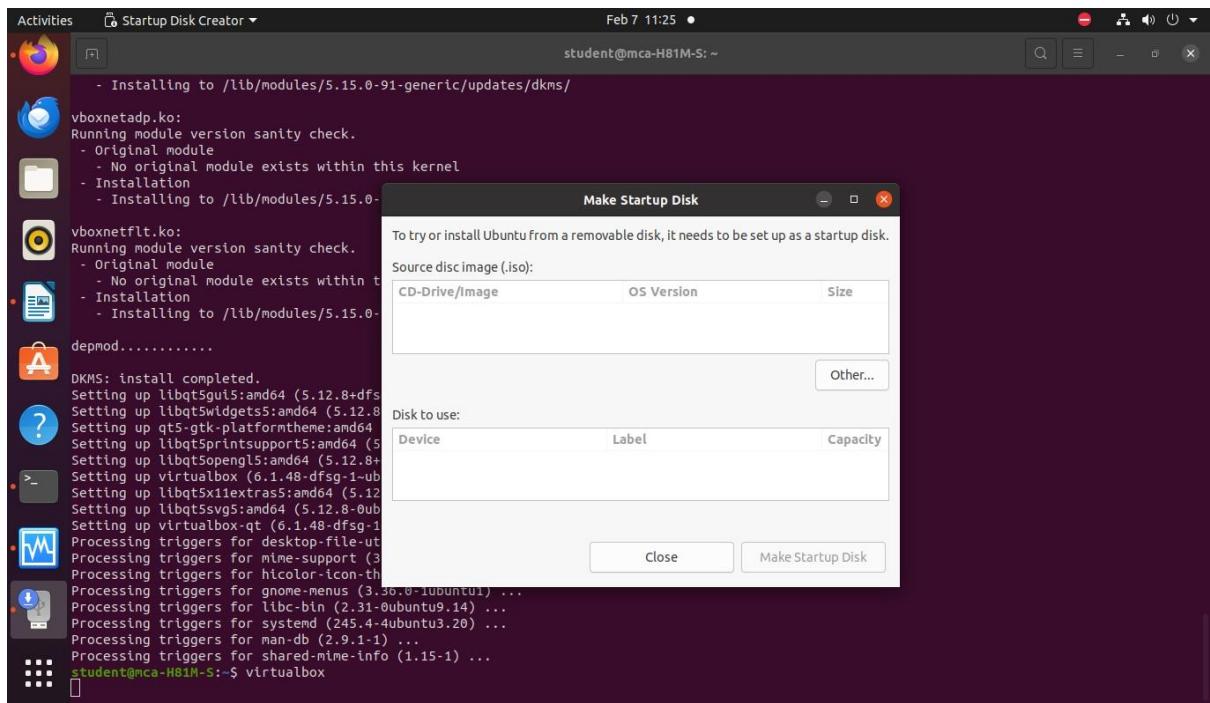

```
Setting up libalgorithm-merge-perl (0.08-3) ...
Setting up libqt5network5:amd64 (5.12.8+dfsg-0ubuntu2.1) ...

## EXPERIMENT 2

### ***AIM:***

Study of a terminal based text editor such as Vim or Emacs. (By the end of the course, students are expected to acquire following skills in using the editor: cursor operations, manipulate text, search for patterns, global search and replace)

Basic Linux commands, familiarity with following commands/operations expected

- 1 man
- 2 ls, echo, read
- 3 more, less, cat
- 4 cd, mkdir, pwd, find
- 5 mv, cp, rm, tar
- 6 wc, cut, paste
- 7 head, tail, grep, expr
- 8 chmod, chown
- 9 Redirections & Piping
- 10 useradd, usermod, userdel, passwd
- 11 df,top, ps
- 12 ssh, scp, ssh-keygen, ssh-copy-id

### **Text Editor**

Text editors are software programs used for creating and editing plain text files. They're essential tools for programmers, writers, and anyone who works with text-based documents.

Unix text editors are:

- VIM
- EMACS
- NANO
- PICO

## VIM

Vim is an acronym for Vi IMproved. It is a free and open-source cross-platform text editor. It was first released by Bram Moolenaar in 1991 for UNIX variants.

Vim is based on the original Vi editor, which was created by Bill Joy in 1976.

### **Vim Modes:**

There are 4 most important modes in Vim:

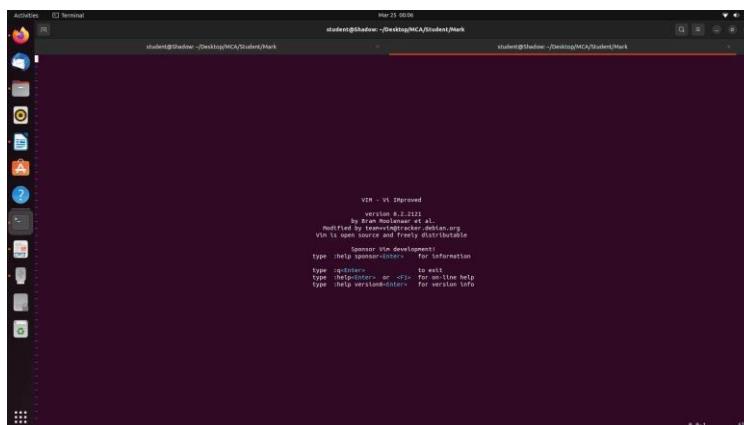

- Command Mode ○
- Command-Line Mode ○
- Insert Mode ○ Visual
- Mode

### **Vim Installation:**

- sudo apt-get update
- sudo apt-get install vim

```
mahi@Shadow: $ sudo apt install vim
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
The following additional packages will be installed:
  ttf-mscorefonts-installer vim-common vim-runtime vim-tiny
Suggested packages:
  ctags vim-doc vim-scripts indent
The following NEW packages will be installed:
  vim vim-runtime
The following packages will be upgraded:
  ttf-mscorefonts-installer vim-common vim-tiny
3 upgraded, 2 newly installed, 0 to remove and 251 not upgraded.
1 not fully installed or removed.
Need to get 0 B/9,387 kB of archives.
After this operation, 37.7 MB of additional disk space will be used.
Do you want to continue? [Y/n] y
Preconfiguring packages ...
```

- vim

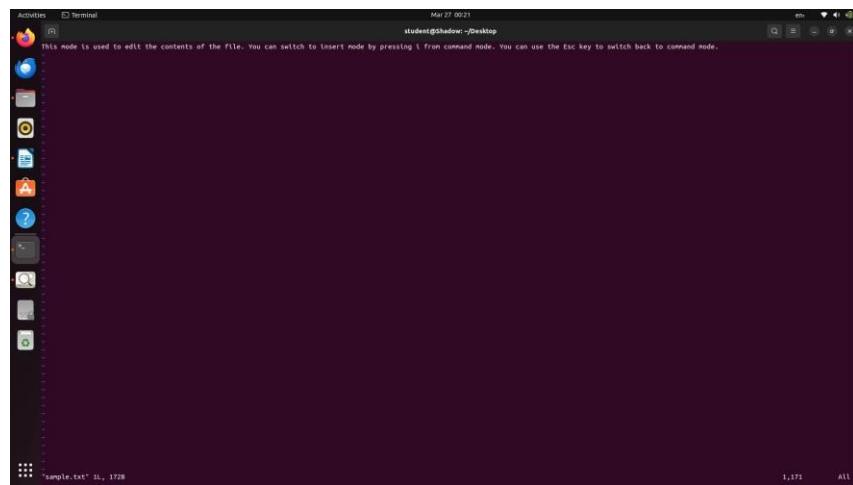

To invoke the vim editor, execute the vim command with the file name:

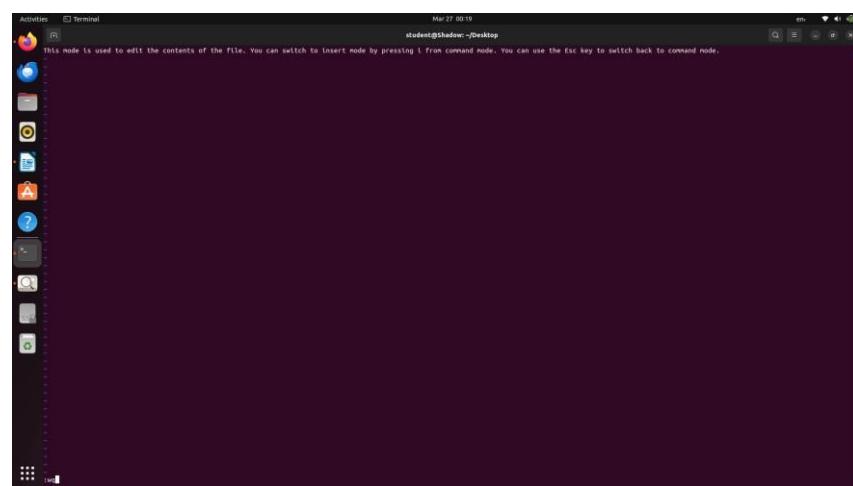

```
Activities Terminal Mar 27 00:19
student@Shadow: ~
```

```
student@Shadow: $ cd Desktop
student@Shadow:~/Desktop$ vim sample.txt
student@Shadow:~/Desktop$
```

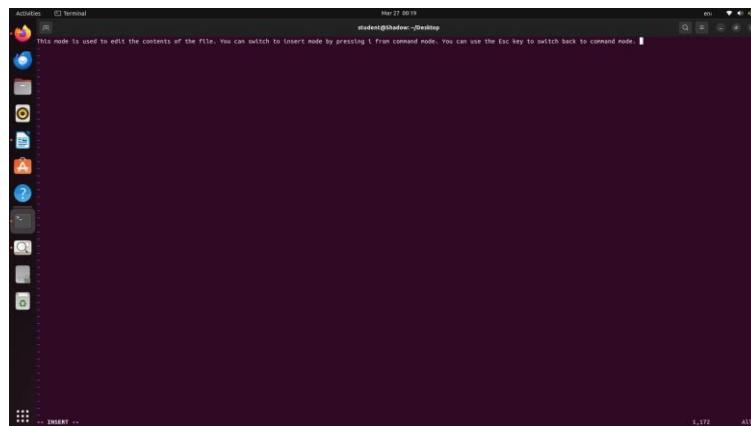

- ❖ **Command Mode:** This is the default mode (also called Normal mode) in Vim. Whenever Vim starts, you'll be in this mode. You can switch to any mode from this mode.

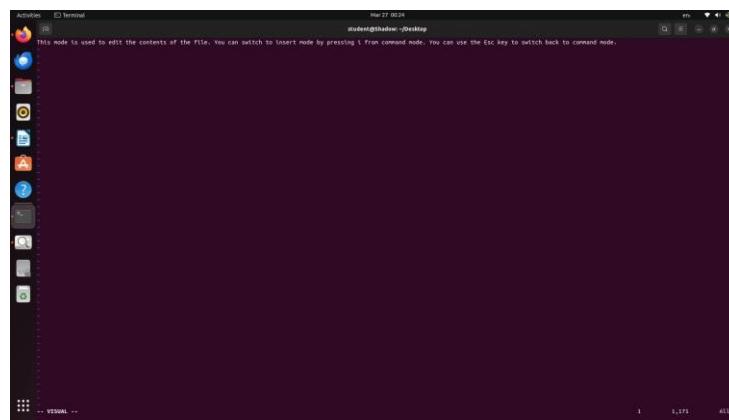

- ❖ **Command-Line Mode:** You can use this mode to play around with some commands. But the commands in this mode are prefixed with a colon (:). You can switch to this mode by pressing : (colon) in command mode.

- ❖ **Insert Mode:** This mode is used to edit the contents of the file. You can switch to insert mode by pressing **i** from command mode. You can use the **Esc** key to switch back to command mode.

- ❖ **Visual Mode:** You use this mode to visually select some text and run commands over that section of code. You can switch to this mode by pressing **v** from the command mode.

## **Basic Linux Commands**

- **whoami** : Display the user.
- **pwd** : Present working directory
- **mkdir** : Create a new directory (folder).
- **cd** : It is used to navigate through the linux files and directories.
- **ls** : List the directory(folder) system.  
ls -a: Will show the hidden file.  
ls -l: Will list the file and directory with detailed information like the permission size, owner...etc.

```
student@Shadow:~$ whoami
student
student@Shadow:~$ pwd
/home/student
student@Shadow:~$ ls
Desktop Documents Downloads Music Pictures Public snap Templates Videos
student@Shadow:~$ cd Desktop
student@Shadow:~/Desktop$ mkdir sample
student@Shadow:~/Desktop$ ls
DNK DS_prgrm Java_Devika Java_Mahesh python_prgrm sample web_tech_prgrm
student@Shadow:~/Desktop$ mkdir -p MCA/Student/Mark
student@Shadow:~/Desktop$ cd MCA
student@Shadow:~/Desktop/MCA$ cd Student
student@Shadow:~/Desktop/MCA/Student$ cd Mark
student@Shadow:~/Desktop/MCA/Student/Mark$ ls
pgm1.py pgm2.py pgm3.py pgm4.py pgm5.py RegistrationForm.html sum.c sumodd.c test1.txt test.txt WebPage.html
student@Shadow:~/Desktop/MCA/Student/Mark$ ls -a
. .. pgm1.py pgm2.py pgm3.py pgm4.py pgm5.py RegistrationForm.html sum.c sumodd.c test1.txt test.txt WebPage.html
student@Shadow:~/Desktop/MCA/Student/Mark$ ls -l
total 44
-rwxr-xr-x 1 student student 281 Dec 24 09:56 pgm1.py
-rwxr-xr-x 1 student student 813 Dec 25 12:19 pgm2.py
-rwxr-xr-x 1 student student 229 Dec 25 12:41 pgm3.py
-rwxr-xr-x 1 student student 335 Dec 25 12:41 pgm4.py
-rwxr-xr-x 1 student student 310 Dec 25 12:42 pgm5.py
-rwxr-xr-x 1 student student 1959 Jan 3 19:52 RegistrationForm.html
-rwxr-xr-x 1 student student 143 Nov 14 05:38 sum.c
-rwxr-xr-x 1 student student 230 Nov 14 05:44 sumodd.c
-rw-rw-r-- 1 student student 159 Mar 25 00:01 test1.txt
-rw-rw-r-- 1 student student 128 Mar 24 23:50 test.txt
-rwxr-xr-x 1 student student 1205 Nov 5 10:01 WebPage.html
student@Shadow:~/Desktop/MCA/Student/Mark$ 

student@Shadow:~$ cd Desktop/MCA/Student/Mark
student@Shadow:~/Desktop/MCA/Student/Mark$ cd ..
student@Shadow:~/Desktop/MCA/Student$ cd ~
student@Shadow:~$ 
```

- **echo**: echo "Hello, World!" - Prints "Hello, World!" to the command line.
- **read** : Reads a line from standard input into the variable.

```
student@Shadow:~/Desktop/MCA/Student/Mark$ echo "Hello World!"
Hello World!
student@Shadow:~/Desktop/MCA/Student/Mark$ read a
I am Devika
student@Shadow:~/Desktop/MCA/Student/Mark$ read b
I am Mahesh
student@Shadow:~/Desktop/MCA/Student/Mark$ echo $a
I am Devika
student@Shadow:~/Desktop/MCA/Student/Mark$ echo $b
I am Mahesh
```

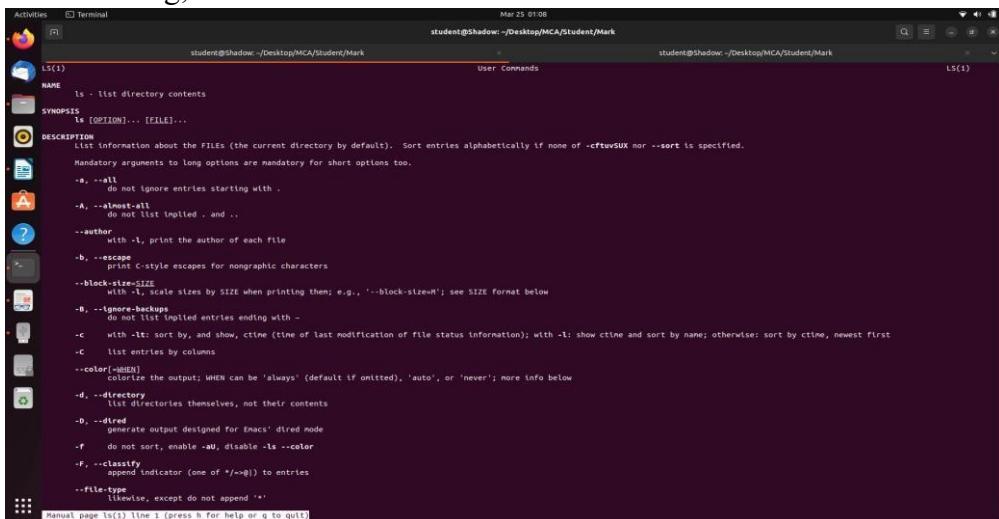

- **more**: Displays text files one page at a time, waiting for user input to continue to the next page.

- **less**: Similar to more, but with additional features such as backward scrolling and searching within the displayed text.
- **cat** : The cat command in Unix-like operating systems stands for "concatenate". cat can concatenate the contents of multiple files and display them. Its also used to create, modify, or display the contents of files.

```
student@Shadow:~/Desktop/MCA/Student/Mark$ cat > test.txt
used to create, modify, or display the contents of files.
cat can concatenate the contents of multiple files and display them.
^Z
[1]+  Stopped                  cat > test.txt
student@Shadow:~/Desktop/MCA/Student/Mark$ cat test.txt
used to create, modify, or display the contents of files.
cat can concatenate the contents of multiple files and display them.
student@Shadow:~/Desktop/MCA/Student/Mark$ cat > test1.txt
The cat command in Unix-like operating systems stands for "concatenate".
^Z
[2]+  Stopped                  cat > test1.txt
student@Shadow:~/Desktop/MCA/Student/Mark$ cat test.txt test1.txt
used to create, modify, or display the contents of files.
cat can concatenate the contents of multiple files and display them.
The cat command in Unix-like operating systems stands for "concatenate".
^Z
student@Shadow:~/Desktop/MCA/Student/Mark$ cat >> test1.txt
cat can be used to append text to an existing file by using output redirection (>>).

student@Shadow:~/Desktop/MCA/Student/Mark$ LS(1)
student@Shadow:~/Desktop/MCA/Student/Mark$ LS(1)
NAME
ls - list directory contents
SYNOPSIS
ls [OPTION]... [FILE]...
DESCRIPTION
List information about the FILEs (the current directory by default). Sort entries alphabetically if none of -cftuvSUX nor --sort is specified.
Mandatory arguments to long options are mandatory for short options too.
-A, --all
do not ignore entries starting with .
-A, --almost-all
do not list implied . and ..
--author
with -l, print the author of each file
-b, --escape
print C-style escapes for nongraphic characters
--block-size=SIZE
with -l, scale sizes by SIZE when printing them; e.g., '--block-size=M'; see SIZE format below
-B, --ignore-backups
do not list implied entries ending with -
-c
with -lt: sort by, and show, ctime (time of last modification of file status information); with -l: show ctime and sort by name; otherwise: sort by ctime, newest first
-C
list entries by columns
--color[=WHEN]
colorize the output; WHEN can be 'always' (default if omitted), 'auto', or 'never'; more info below
-d, --directory
list directories themselves, not their contents
-D, --dired
generate output designed for Emacs' dired mode
-f
do not sort, enable -aU, disable -l, --color
-F, --classify
append indicator (one of */=*) to entries
--file-type
likewise, except do not append :.
--help
display this help and exit
--version
output version information and exit
Manual page ls(1) (page 1) (press h for help or q to quit)
```

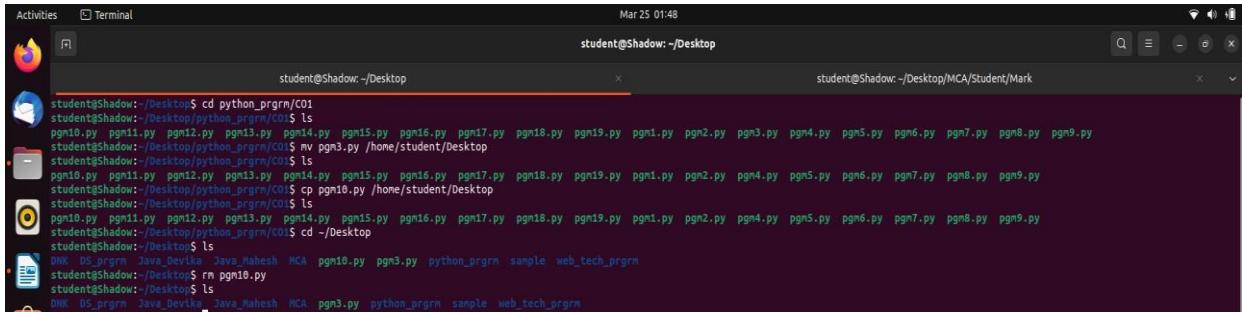

- **find** : Searches for files and directories in a directory hierarchy.

```
student@Shadow:~$ find . -name pgm1.py
./Desktop/MCA/Student/Mark/pgm1.py
./Desktop/python_prgrm/C01/pgm1.py
student@Shadow:~$
```

- **mv**: Moves a file or directory from one location to another.

For example, mv file1.txt /path/to/new/location/ moves file1.txt to /path/to/new/location/.

- **cp:** Copies a file or directory from one location to another.  
For example, cp file1.txt file2.txt copies file1.txt to file2.txt.
- **rm:** Deletes (removes) a file or directory.  
For example, rm file.txt deletes file.txt.
- **tar:** Creates an archive of files and directories.

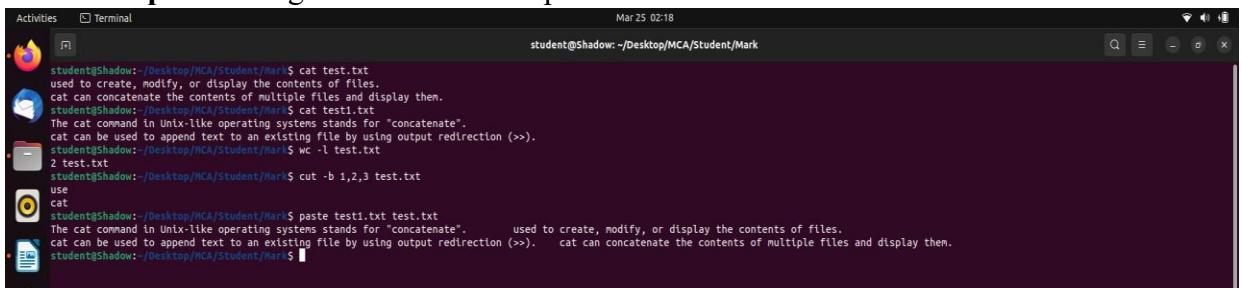

```

student@Shadow:~/Desktop$ cd python_prgm/C01
student@Shadow:~/Desktop/python_prgm/C01$ ls

```

- **wc:** wc -l file.txt - Counts the number of lines in file.txt.
- **cut:** Extracts specific fields from lines in a file based on a delimiter.
- **paste:** Merges lines from multiple files.

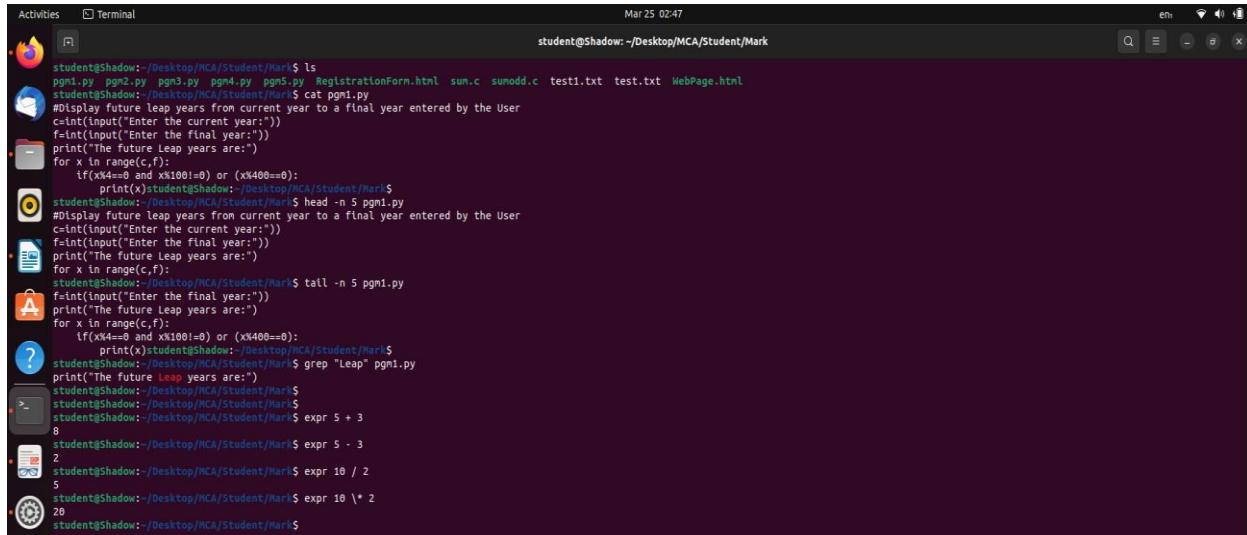

```

student@Shadow:~/Desktop/MCA/Student/Mark$ cat test.txt
used to create, modify, or display the contents of files.
cat can concatenate the contents of multiple files and display them.
student@Shadow:~/Desktop/MCA/Student/Mark$ cat test1.txt
The cat command in Unix-like operating systems stands for "concatenate".
cat can be used to append text to an existing file by using output redirection (>).
student@Shadow:~/Desktop/MCA/Student/Mark$ wc -l test.txt
2 test.txt
student@Shadow:~/Desktop/MCA/Student/Mark$ cut -b 1,2,3 test.txt
use
use
cat
student@Shadow:~/Desktop/MCA/Student/Mark$ paste test1.txt test.txt
The cat command in Unix-like operating systems stands for "concatenate".
cat can be used to append text to an existing file by using output redirection (>).
cat can concatenate the contents of multiple files and display them.
student@Shadow:~/Desktop/MCA/Student/Mark$ 

```

- **head:** head -n 5 file.txt - Displays the first 5 lines of file.txt.
- **tail:** tail -n 5 file.txt - Displays the last 5 lines of file.txt.
- **grep:** Grep command is used to search through all the text in a given file.  
Eg: grep "pattern" file.txt - Searches for lines containing "pattern" in file.txt.
- **expr:** It was used to evaluate a given expression and display its corresponding output.

Eg: expr 5 + 3 - Evaluates the expression 5 + 3

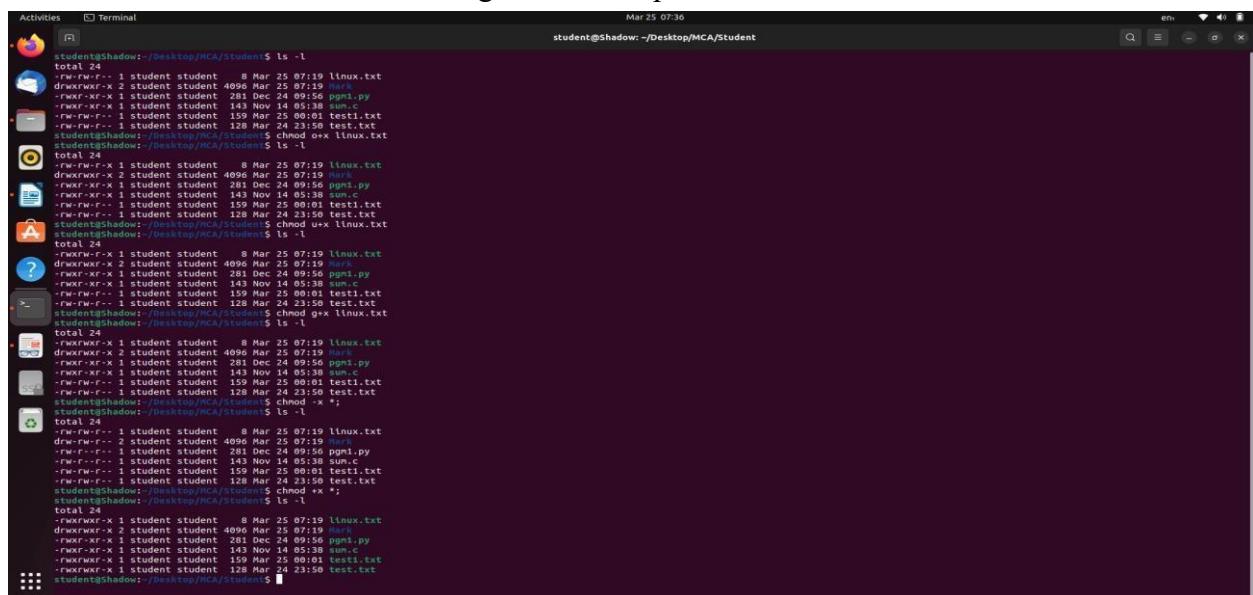

```

student@Shadow: ~/Desktop/MCA/Student/Mark$ ls

student@Shadow: ~/Desktop/MCA/Student$ 

```

- **chown:** It is used to change the files ownership, directory, or symbolic link for a user or group.

```

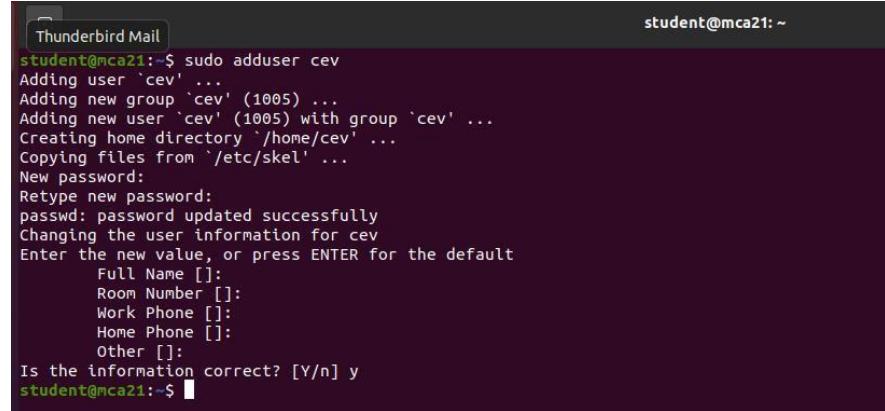

student@mca21:~$ cat >file3.txt
Hello,Good Morning
student@mca21:~$ ls -l file3.txt
-rw-rw-r-- 1 student student 19 Mar 25 11:42 file3.txt
student@mca21:~$ sudo chown -v mca file3.txt
changed ownership of 'file3.txt' from student to mca
student@mca21:~$ 

```

- **redirection and piping:** Pipe is used to combine two or more commands and in this the output of one command and act as input to the another command, and this command output may act as input to the next command. Redirection in linux

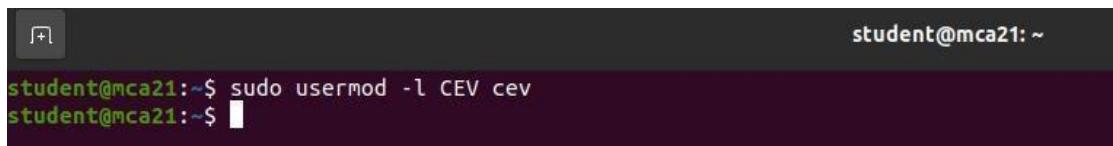

command refers to the ability of the linux operating system that allows as to change the standard input and standard output when executing a command on the terminal.

- **useradd:** It is used to for adding /creating user accounts in linux and other unixlike operating systems.

```
student@mca21:~$ sudo adduser cev
Adding user `cev' ...
Adding new group `cev' (1005) ...
Adding new user `cev' (1005) with group `cev' ...
Creating home directory `/home/cev' ...
Copying files from `/etc/skel' ...
New password:
Retype new password:
passwd: password updated successfully
Changing the user information for cev
Enter the new value, or press ENTER for the default
  Full Name []:
  Room Number []:
  Work Phone []:
  Home Phone []:
  Other []:
Is the information correct? [Y/n] y
student@mca21:~$
```

- **usermod:** It is used to modify existing user account details, such as username,password,home directory location,default shell, and more.

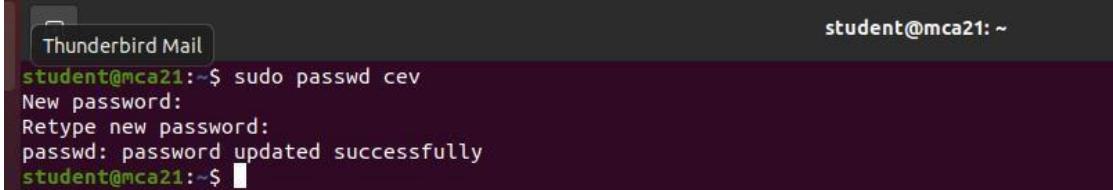

```
student@mca21:~$ sudo usermod -l CEV cev
student@mca21:~$
```

- **userdel:** It is used to delete a user account and related files.

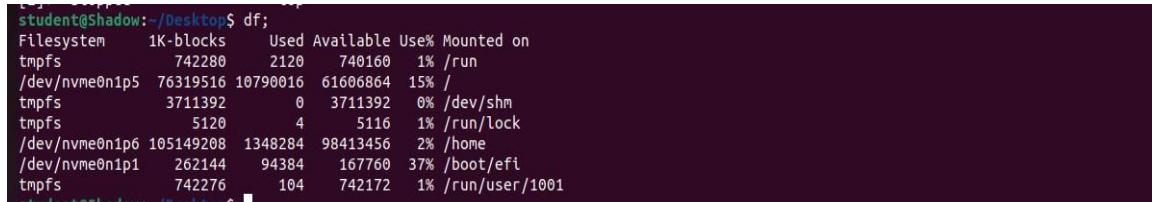

```
student@mca21:~$ sudo userdel cev1
student@mca21:~$
```

- **passwd:** Passwd command used to change password for user accounts.

```
student@mca21:~$ sudo passwd cev
New password:
Retype new password:
passwd: password updated successfully
student@mca21:~$
```

- **df:** It is used to display the disk space used in the file system.

```
student@Shadow:~/Desktop$ df;
Filesystem 1K-blocks Used Available Use% Mounted on
tmpfs 742280 2120 740160 1% /run
/dev/nvme0n1p5 76319516 10790016 61606864 15% /
tmpfs 3711392 0 3711392 0% /dev/shm
tmpfs 5120 4 5116 1% /run/lock

```

- **ps**: It is used to list the currently running processes and their PIDs along with some other information depends on different option.

```

student@Shadow:~$ ps
  PID TTY      TIME CMD
 3273 pts/0    00:00:00 bash
 3326 pts/0    00:00:00 cat
 3955 pts/0    00:00:00 top
 4109 pts/0    00:00:00 ps

```

- **ssh** : It instructs the system to establish an encrypted secure connection with the host machine.

To check the system containing ssh using the command;

\$ “ssh”

The installation command on ssh is:

```
$ “sudo apt-get install open ssh-server”
```

To check the system IP address using the command:

```
$ “ifconfig”
```

Ping command using to check working:

```
$ “ping second system IP”
```

To login second system using the given command:

```
$ “ssh second system user@second system IP”
```

```
$ “cd Desktop”
```

```
$ “ls”
```

```
student@mca-Veriton-M200-H81:~$ sudo apt install openssh-server
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following additional packages will be installed:
  ncurses-term openssh-sftp-server ssh-import-id
Suggested packages:
  molly-guard monkeysphere ssh-askpass
The following NEW packages will be installed:
  openssh-server
